

March 2011

DOCUMENT STATUS

The following documents are with the agencies for review:

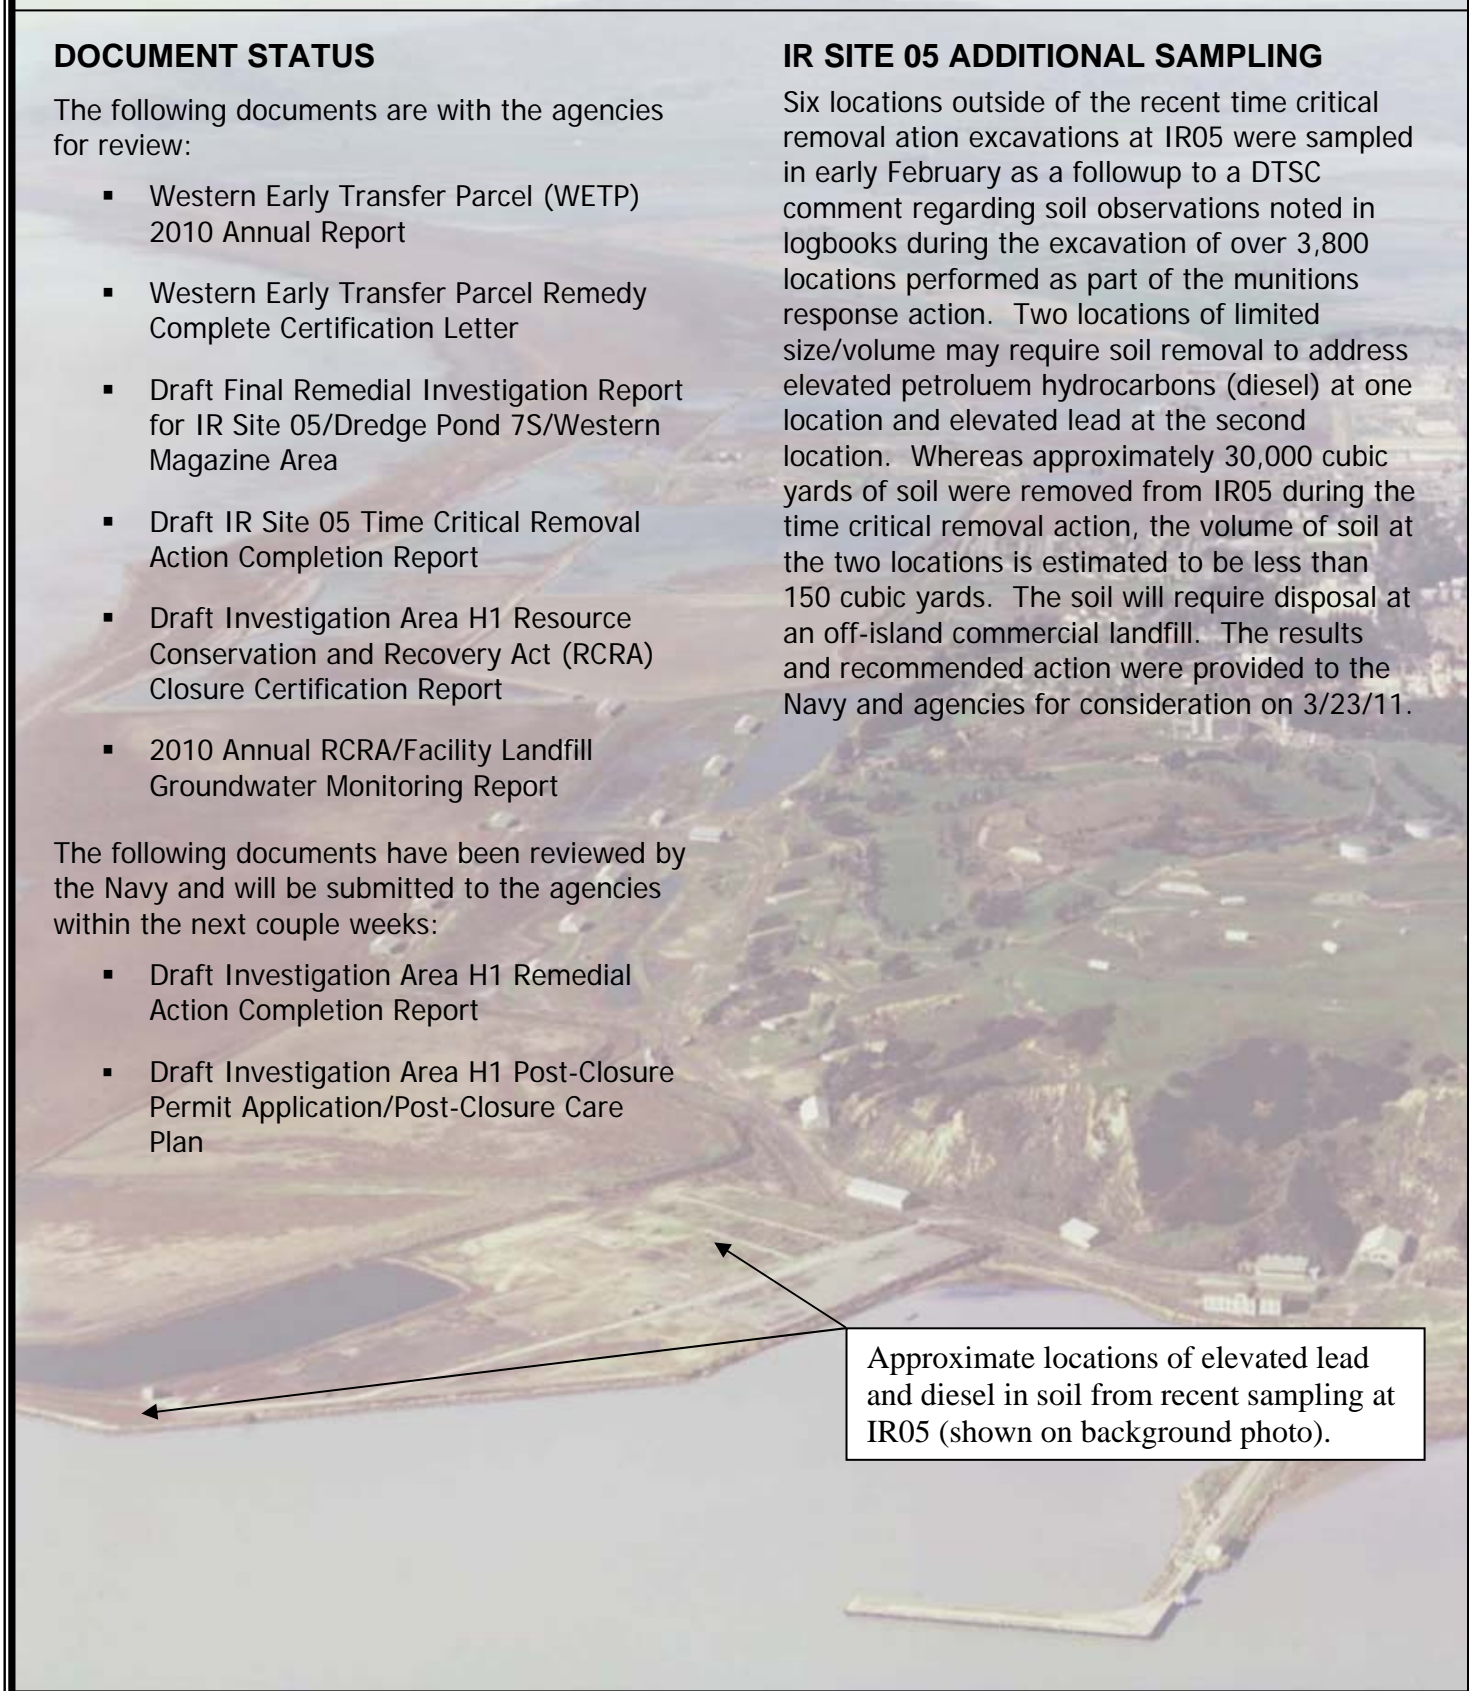

- Western Early Transfer Parcel (WETP) 2010 Annual Report
- Western Early Transfer Parcel Remedy Complete Certification Letter
- Draft Final Remedial Investigation Report for IR Site 05/Dredge Pond 7S/Western Magazine Area
- Draft IR Site 05 Time Critical Removal Action Completion Report
- Draft Investigation Area H1 Resource Conservation and Recovery Act (RCRA) Closure Certification Report
- 2010 Annual RCRA/Facility Landfill Groundwater Monitoring Report

The following documents have been reviewed by the Navy and will be submitted to the agencies within the next couple weeks:

- Draft Investigation Area H1 Remedial Action Completion Report
- Draft Investigation Area H1 Post-Closure Permit Application/Post-Closure Care Plan

IR SITE 05 ADDITIONAL SAMPLING

Six locations outside of the recent time critical removal action excavations at IR05 were sampled in early February as a followup to a DTSC comment regarding soil observations noted in logbooks during the excavation of over 3,800 locations performed as part of the munitions response action. Two locations of limited size/volume may require soil removal to address elevated petroleum hydrocarbons (diesel) at one location and elevated lead at the second location. Whereas approximately 30,000 cubic yards of soil were removed from IR05 during the time critical removal action, the volume of soil at the two locations is estimated to be less than 150 cubic yards. The soil will require disposal at an off-island commercial landfill. The results and recommended action were provided to the Navy and agencies for consideration on 3/23/11.

Approximate locations of elevated lead and diesel in soil from recent sampling at IR05 (shown on background photo).
